AN AID TO THE IDENTIFICATION OF THE SOUTH AMERICAN
SPECIES OF *AMPHISBAENA* (SQUAMATA, AMPHISBAENIDAE)

P. E. VANZOLINI

ABSTRACT

A matrix of meristic characters is presented to orient the identification of South American Amphisbaena. Complementarily is given a checklist containing the citation of the original description, the type locality, identified, and a citation of a modern description useful to the identification.

KEYWORDS: *Amphisbaena*, identification.

RESUMO

O trabalho consiste de uma matriz de caracteres merísticos, destinada a orientar a identificação das espécies sul americanas de Amphisbaena. Complementarmente é apresentada uma lista remissiva contendo a citação original, a localidade tipo, identificada, e a citação de uma descrição recente útil à identificação.

PALAVRAS-CHAVE: *Amphisbaena*, identificação

INTRODUCTION

The species of *Amphisbaena* are relatively easy to identify based on meristic characters. This sort of approach indicates a matrix format as more

Trabalho recebido para publicação em 12.IV.2002 e aceito em 11.IX.2002.

adequate than dichotomous keys, such as given in Peters & Donoso-Barros (1986). The matrix here presented is arranged according to the succession of steps taken in our laboratory.

It starts with the number of preanal pores, sequentially ordered, and proceeds through the usual scale counts: body annuli, tail annuli, autotomy level, number of dorsal and ventral segments to a midbody annulus. The scale count ranges presented are from the literature and from our own collection (37 identified South American species, ca. 1700 specimens). A brief indication of geographical range is given for a first check of the plausibility of the identification. This procedure usually results in a quick and reliable identification, but this cannot be considered completed without reference to a good detailed description of the species; a list of easily available ones is contained in the appended checklist, which additionally mentions the original description and the type locality (geographical coordinates mostly researched by myself).

This matrix has been in use in our laboratory for the last twenty years, and has proved easy and satisfactory to use.

CHECKLIST

Amphisbaena alba Linnaeus, 1758 (p. 228).

Type locality, "America".

Reference: Gans 1962a.

Amphisbaena albocingulata Boettger, 1885 (p. 219).

Type locality, "Paraguay".

Reference: Gans 1966 (*A. prunicolor albocingulata*).

Amphisbaena anaemariae Vanzolini, 1997 (p. 66).

Type locality, Brasil: Goiás: Serra da Mesa, Ponto 2 ($14^{\circ}02'S$, $48^{\circ}13'W$).

Amphisbaena angustifrons Cope, 1861 (p. 76).

Type locality, Argentina: Buenos Aires: Buenos Aires ($34^{\circ}38'S$, $58^{\circ}28'W$).

References: Gans 1965; Gans and Diefenbach 1972.

Amphisbaena arenaria Vanzolini, 1991 b (p. 350).

Type locality, Brasil: Bahia: Raso da Catarina ($09^{\circ}42'S$, $38^{\circ}31'W$).

Amphisbaena bolivica Mertens, 1929 (60).

Type locality, Bolivia: Tarija: Villa Montes ($21^{\circ}15'S$, $63^{\circ}30'W$).
